Lab Partner(s) Katherine

Date Performed 24/01/24

Date Submitted 25/01/24

Lab (such as #1: UNC) #1: UNC

TA: Phillip

GRADE (to be filled in by your TA) See your TA for detailed feedback.

An 'x' next to a subcategory means you need to improve this aspect of your work.

Paper Subtotals (points)

() **General (6)**

____ Sig. figs.
____ Units
____ Clarity of Presentation
____ Format

() **Abstract (4)**

____ Quantity or principle
____ How measurement was made
____ Numerical Results
____ Conclusion

() **Intro & Theory (9)**

____ Basic principle
____ Main equations to be used
____ Apparatus
____ What will be plotted
____ Fitting parameters related

() **Exp. Procedures (15)**

____ Description
____ Stating and justifying uncertainties
____ Data Record
____ Quality of Lab Work

() **Analysis & Error Analysis (20)**

____ Discussion
____ Equations & Calculations
____ Presentation inc. Graphs, Tables
____ Results Reported & Reasonable
____ Underlined items addressed

() **Discussion & Conclusions (6)**

____ Numerical comparison of results
____ Logical conclusions
____ Discussion of pos. errors
____ Suggestions to reduce errors

() **Paper Total (60 points)**

(30 points for CME or EPF)

() **Notebook (10 points)**

____ Format (*proper style, following directions*)
____ Apparatus (*brief description of equipment, including sketches*)
____ Data (*including computer file names and manually recorded data*)
____ Experimental Technique (*describing your procedures; stating & justifying uncerts.*)
____ Analysis (*results and errors*)

() **Worksheet(s)/Fill-in-the-Blank-Report (30 points) if applicable**

() **Adjustments** – late submissions, improper procedures, etc. – or bonus points for exceptional work.

() **Total Grade**

Graded by _____ (TA's initial)

Acceleration Due to Gravity on Europa-Newton's Model
Katherine + Trevor

Acceleration Due to Gravity on Europa-Aristotle's Model
Katherine + Trevor

a_N and δ_{a_N} are shown on the graph

Newton's model is significantly closer to modeling the data than Aristotle's model. As you can see in the variance in the slope, Newton's has around 6x less variance and roughly one order of magnitude higher correlation (r). The data points on Newton's graph stay significantly closer to the fit line whilst Aristotle's model has a consistent and predictable deviation from the line of best fit. I would report a value of $0.65 \pm 0.001 \frac{m}{s^2}$ to my supervisor.
