

Picking 3 Projects

Evan Harnak would love to join me

1

NixOS CLI

<https://github.com/nix-community/nixos-cli>

License: GPL 3.0

Contains Contributor Guide? No, but has code-of-conduct

Contains Active Issues? Yes

Development Environment Successfully Created? Yes

Programming Language(s) for Feature/Fix: Go

One of the following depending on path:

- Path 1: 2-3 sentences describing feature you plan on implementing.
 - Adding security flags to the program and possibly adding PAM support for authentication for non-wheel or trusted-user
- Path 2: Did you test the SAST or DAST tool to see if it would work on this project?
 - Not yet

2

Nix

<https://github.com/NixOS/nix>

License: LGPL 2.1

Contains Contributor Guide? Yes

Contains Active Issues? Yes

Development Environment Successfully Created? Yes

Programming Language(s) for Feature/Fix: C++

One of the following depending on path:

- Path 1: 2-3 sentences describing feature you plan on implementing.
 - Checking for any security vulnerabilities and possibly adding stricted securtiy flags for sandboxing
- Path 2: Did you test the SAST or DAST tool to see if it would work on this project?
 - Not yet

3

Singularity

<https://github.com/sylabs/singularity>

<https://github.com/sylabs/singularity/issues/947>

License: BSD 3-clause

Contains Contributor Guide? Yes

Contains Active Issues? Yes

Development Environment Successfully Created? Yes

Programming Language(s) for Feature/Fix: Go

One of the following depending on path:

- Path 1: 2-3 sentences describing feature you plan on implementing.
 - I saw a few security related issues that seem not too difficult to fix or implement
- Path 2: Did you test the SAST or DAST tool to see if it would work on this project?
 - Not yet
